RESEARCH PROJECTS

MAY 2014-PRESENT	**Dynamic Mutation Analysis** (Software Testing, Program Analysis | C++) Advisor: Dr. Yingfei Xiong Software Engineering Institute, Peking University — Developed a novel model of mutation analysis that analyzed mutants during the execution of the program, and forked the execution only when a mutant led to a new system state; — Prepared the manuscript and submitted to ICSE 2016, pending review; Corresponding poster exhibited in PKU Young Scientist Symposium 2015.
JUL 2015-OCT 2015	**Language Based Architectural Control** (Software Architecture, Programming Languages | Java) Advisor: Dr. Jonathan Aldrich Institute of Software Research, Carnegie Mellon University — Extended a module system based on Wyvern Language to enforce the architectural behavior by integrating these architectural descriptions directly into the language.
SEP 2014-OCT 2015	**Contextual Dynamic QR Code** (Mobile Computing | HTML+Servlet+Android) Advisor: Dr. Kaigui Bian Institute of Network Computing and Information Systems, Peking University — Initiated a novel QR code system which accepted inputs from many phone sensors besides the phone camera, and dynamically varied its output according to various contexts where the code is published; — Corresponding patent accepted by State Intellectual Property Office of China; Manuscript submitted to IEEE ICC 2016, pending review.
